My Portfolio

ACADEMIC QUALIFICATIONS

Year	Degree	Institute	SGPA/%
2022-2026	Bachelor of Technology, CSE	Dr. A.P.J. Abdul Kalam Technical University, UP	8.51

KEY PROJECTS

- NEURA - Chat to Action Multi Task Execution System** (Individual Project) (Sep '25)
links - [GitHub](#) | [Demo](#) | [Workflow](#)
 - Built a full-stack web app that converts a multiple intent **NL input** into multiple tasks by splitting, classifying, and routing **user commands** (playing music, sending self generated emails, scheduling events, weather, news) in real time
 - Implemented secure **email automation** using **Google OAuth 2.0** and **Gmail API** with token management, validation and built a **real-time chat UI** using **React (Vite)** to consume backend APIs and display aggregated responses
 - Developed **REST APIs** using **FastAPI** to orchestrate **query splitting, intent classification, & task execution**, integrating **ML models** such as **DistilBERT** for **intent classification** and **Mistral (via Ollama)** to **send emails**
 - * **Frontend & Backend:** React, Vite, FastAPI, Python, REST APIs, Google OAuth, Youtube API, Google APIs
 - * **Models & Tools:** T5-small, DistilBERT, HuggingFace Transformers, Mistral (via Ollama), Langchain, Git
- StackNotes - Your Personal Dev Workspace, BitGranth** (Group Project) (In Progress)
link - [GitHub](#)
 - Contributing to building a full-stack digital notebook platform for programmers and DSA learners to organize notes, code snippets, and screenshots within a private workspace, using **React + TypeScript** with **backend APIs**
 - Developing **RESTful services in Go** for **user management & CRUD operations** on notes, snippets, & related data
 - My Recent Contribution - Implemented **JWT-based authentication** to secure user-specific workspaces and built **image upload and storage logic** linking screenshots with notes and snippets
 - * **Frontend and database:** React, TypeScript, MongoDB
 - * **Backend & Tools:** Go, REST APIs, JWT Authentication, Git
- ArcLens - Unified Document Intelligence & Routing System** (Group Project) (In Progress)
links - [GitHub](#)
 - Built a full-stack system to ingest, process, summarize, and route multiple organizational docs from multiple sources, developing **backend using Node.js** for **doc ingestion, authentication, routing, notif, & email** via **REST APIs**
 - Implemented **real-time document processing and routing updates** using **Socket.IO**, integrating data processing pipelines like **authentication, notification, and document services** to support end-to-end automation
 - Designed the **React frontend** and implemented **doc upload** and storage with **role-based routing**, along with a **RAG-based multi-doc summarization** using **OCR and transformers** across emails, PDFs, DOCX, & scanned docs
 - * **Frontend, Backend & DB:** React, Node.js, Express, REST APIs, Socket.IO, Cookie Auth, SQL, Elastic Search
 - * **ML Tools & APIs:** RAG pipeline, Tesseract OCR, Hugging Face Transformers, GPT model

INTERNSHIP EXPERIENCE

- GenAI Intern – IBM (Remote)** (June'25 - Aug'25)
 - Worked on an AI-powered multi-language translator as part of IBM's PBEL program, focused on context-aware translation using large language models (LLMs). Implemented transformer-based models, prompt engineering, and multilingual NLP pipelines to build **VertaAI - a generative AI multi language translator**. [*link - [GitHub](#) | [Demo](#) | [AI workflow](#)*]

TECHNICAL SKILLS

Languages/Frameworks: Python | Java | Go | JavaScript | MERN | Node.js | React | FastAPI | Express | SQL database
Core Competencies & Soft Skills: DSA | System Design | DBMS | OOPS | Operating Systems | Computer Networks
ML & Tools: GPT models | Transformers | TensorFlow | Jupyter Notebook | Tesseract OCR | Git | API Integration

RESEARCH WORK

- Conceptual Framework for Decentralized Machine Unlearning for Ethical AI Using Federated Learning** (Apr' 25)
(Presented in Research Paper Presentation at Techvyom'25, SRMSCET) (*drive link - [research-paper](#)*)
 - Proposed a novel framework integrating **Federated Learning, Blockchain**, and **Machine Unlearning** to enable verifiable, fast, and permanent removal of personal data from AI systems.

POSITIONS OF RESPONSIBILITY & COMPETITIVE EXPERIENCE

- IIT-Delhi Rendezvous'24, Team Lead:** Secured an **AIR 6**. Proposed solutions to streamline India's blood donation system.
- IIT Indore Hackathon'24, Team Lead:** Got **AIR 3 /960+ teams** for crafting onboarding flow for e-commerce platform.
- SIH'24, Team Lead :** Secured **2nd waitlist** place among **500 teams**. Proposed an ML driven resource conservation system.
- SRMSCET Hackathon'23:** Placed **2nd** for working on an AI-powered automatic alarm and drone payload delivery mechanism.

ACHIEVEMENTS

- Received a total scholarship of **90,000 INR** for good academic performance in B.Tech, SRMSCET.
- Presented **FinTech market analysis** at IIM Raipur's Vishleshan, 2024, secured **AIR 2** by analyzing end-to-end FinTech operational workflows and identifying process inefficiencies (*link - [Presentation](#)*)
- Attained **1st place** in '**Code Quest**' at Techvyom'24.
- Took the **1st place** in '**APTECH Catechization**' at **TECHNOVAGANZA'22**.
