

SAUMYA GUPTA

(Department of Computer Science and Engineering, AKTU, India)

EDUCATION

Year	Degree	University	SGPA
2022-2026	Bachelor of Technology, CSE (4 th year)	Dr. A.P.J. Abdul Kalam Technical University, UP	9.42

KEY PROJECTS

• NEURA - Chat to Action Multi Task Execution System (Individual Project)

(September 2025)

links - [GitHub](#), [Demo](#), [Workflow](#)

- Built a full-stack web app that converts a **multiple intent NL input** into multiple tasks by **splitting, classifying, and routing** user commands (playing music, sending self-generated emails, scheduling events, weather, news) in **real time**
- Implemented a **secure email automation** using **Google OAuth 2.0** and **Gmail API** with token management, validation and made a real-time chat UI using React (Vite) to consume backend APIs and display aggregated responses.
- Developed **REST APIs using FastAPI** to orchestrate **query splitting, intent classification, and task execution**, integrating ML models such as **DistilBERT for intent classification** and **Mistral (via Ollama) to send emails**.
- *** Frontend & Backend:** React, Vite, FastAPI, Python, REST APIs, Google OAuth, YouTube API, Google APIs
- *** Models & Tools:** T5-small, DistilBERT, HuggingFace Transformers, Mistral (via Ollama), Langchain, Git

• StackNotes - A Personal Dev Workspace, BitGranth (Group Project)

(In Progress)

link - [GitHub](#)

- Contributing to a full-stack **digital notebook platform** for programmers and DSA learners to organize the notes, code snippets, and screenshots within a **private workspace**, using React + TypeScript with backend APIs
- Carrying out **RESTful services in Go** for user management & **CRUD** operations on notes, snippets, & related data
- **My Recent Contribution** - Pipelined a complete **JWT and OTP based login AuthN**, integrating **refresh token** logic to secure user-specific workspaces and built image upload and storage logic linking screenshots with notes and snippets
- *** Frontend and database:** React, TypeScript, MongoDB
- *** Backend & Tools:** Go, REST APIs, JWT Authentication, Git

• Doclytic – A Unified Document Intelligence & Routing Ecosystem (Group Project)

(March 2026)

links- [GitHub](#), [Demo](#), [Workflow](#)

- Built a full-stack system to **ingest, process, summarize, and route** multiple organizational docs from multiple sources, developing backend using Node.js for doc ingestion, authentication, routing, notifications, & email via REST APIs.
- Executed **real-time document processing, classification & their routing** using Socket.IO, with data processing pipelines like **authentication, priority calculation, notification, and document services**, and implemented **4 summarization pipelines for quick review, multiple document summarization, detailed analysis and chat system; optimized them by reducing latency by over 80%** (45s to 5s for quick reviews).
- Designed the React frontend and implemented **document upload and storage** with role-based routing, along with a **RAG** based chat system & summarization using OCR and transformers across emails, PDFs, DOCX, & scanned docs
- *** Frontend, Backend & DB:** React, Node.js, Express, REST APIs, Socket.IO, Cookie Auth, SQL
- *** ML Tools & APIs:** RAG pipeline, Tesseract OCR, Hugging Face Transformers, GPT model

WORK EXPERIENCE

• GenAI Intern – IBM (Remote)

(June 2025 – August 2025)

- Worked on an AI-powered multi-language translator as part of IBM's PBEL program, focused on **context-aware translation** using large language models (LLMs). Implemented **transformer-based models, prompt engineering**, and **multilingual NLP** pipelines to build **VertaAI a generative AI multi language translator** for 5 languages.

TECHNICAL SKILLS

Languages/Frameworks: Python, Java, JavaScript, MERN, Node.js, React, FastAPI, Express, SQL database

Core Competencies & Soft Skills: DSA, System Design, DBMS, OOPS, OS, CN, Problem Solving

ML & Tools: GPT models, Transformers, TensorFlow, Jupyter Notebook, Git, API Integration

RESEARCH WORK

• Conceptual Framework for Decentralized Machine Unlearning for Ethical AI using Federated Learning

(April 2025)

(Presented in Research Paper Presentation at Techvyom '25, SRMSCET) ([drive link -research-paper](#))

- Proposed a novel framework integrating **Federated Learning, Blockchain, and Machine Unlearning** to enable verifiable, fast, and permanent removal of personal data from AI systems.

POSITONS OF RESPONSIBILITY & COMPETITIVE EXPERIENCE

- **IIT-Delhi Rendezvous' 24, Team Lead:** Secured an **AIR 6**. Proposed solutions to streamline India's blood donation system.
- **IIT Indore Hackathon' 24, Team Lead:** Got **AIR 3 /960+** teams for crafting onboarding flow for e-commerce platform.
- **SIH' 24, Team Lead:** Secured **2nd waitlist** place among **500** teams. Proposed an ML driven resource conservation system.
- **SRMSCET Hackathon' 23:** Placed **2nd** for working on an AI-powered automatic alarm and drone payload delivery mechanism.

ACHIEVEMENTS

- Received a total scholarship of **90,000 INR** for **3rd rank** in **B.Tech, SRMSCET**.
- Presented **FinTech market analysis** at **IIM Raipur's Vishleshan, 2024**, secured **AIR 2** by analyzing end-to-end FinTech operational workflows and identifying process inefficiencies ([link -Presentation](#))
- Attained **1st place** in '**Code Quest**' at **Techvyom' 24**.
- Took the **1st place** in '**APTECH Catechization**' at **TECHNOVAGANZA' 22**.
